AMELIA EARHART, first

woman to fly the Atlantic, has been selected as the subject for the fifth commemorative medal of the Societe Commemorative de Femmes Celebres Inc. of Wynnewood, Pa. She received more than double the number of votes cast for Clara Barton, founder of the American Red Cross. Other runners-up were Dolley Madison and Dr. Elizabeth Blackwell.

Medal No. 3, honoring Marie Sklodovska Curie, has now been released. Sculptured by Thomas G. Lo Medico, it pictures the great woman scientist in her laboratory. The reverse marks her isolation (with her husband Pierre) of polonium and radium in 1898.

Florence Nightingale is the subject of the fourth medal, to be released next month. This medal was designed by Paul Vincze.

A reciprocal forfeited membership agreement has been signed by the Societe Commemorative de Femmes Celebres and the National Commemorative Society. Members of one group may now apply for a forfeited membership in the other.
